Dear Madam or Sir:

I am currently enrolled in the second year of the Water Quality Technology program. I have a deep interest in this field and the desire to do well within it.

I started the Water Quality program right after graduation. I was seventeen and not too many people took me seriously. I have been paying my own way through college and supporting my self for the past 2 years. I do alright but money is always tight. It would be a big relief if I could receive some financial help.

I have a cumulative average grade of 83.24% for the first and second semesters. Apparently, this is one of the highest grade averages in the Water Quality program. I have plans to do better in the second semester. I do not like to fail and strive to do the best that I possibly can. The interest that I have in this field motivates me to learn as much as I can; which is reflected in my work ethic and grades. I hope to become a highly certified operator at a water or wastewater facility and possibly obtain a managerial position in future years. I have already started this process by writing and passing the EOCP test for Operator in Training. I am looking forward to writing the Level one test after my next CO-OP work term is completed.

Thank you for reviewing my application. If I am selected it would be a huge help and would be much appreciated. I plan to go far and have a long prosperous career in the field of water quality; this award would be a big help in allowing me to achieve my goal.

Sincerely,

Dillon Bucknell
